...begin your journey

■ Giving

You a Growing Advantage

The organic growers that use our fresh fish fertilizer come in a variety of sizes and different crop sectors. From large agri-businesses to smaller independent farms, each want the superior soil and plant enrichment, robust crops and less environmental stress on their acreage that Pacific Natural® provides.

If you are an organic or conventional farmer then you already understand the importance of selecting the best fertilizer for your crop. Providing the best conditions for the beneficial microorganisms that dwell in your soil is just as important as taking care of the plants and food that you harvest. That's why Pacific Natural® has been designed to provide "good food simply" for both your crop as well as the soil microbes that synthesize nitrogen and other essential plant nutrients at the root level. An active soil ecosystem will improve the vitality of your crop and increase the production of new soil.

Pacific Natural® fresh fish fertilizer provides excellent results for:

- Grapes
- Berries
- Nut & Fruit Trees
- Forage & Cash Crops
- Vegetable Crops
- Hops
- Landscaping, Horticulture & Turf

Over the past decade our fertilizer has also been selected to grow many prize-winning giant pumpkins in major harvest festivals. In addition to bringing out the brightly colored landscape of botanical attractions and golf courses, the environmental benefits that come from using a certified organic product like Pacific Natural® instead of chemicals are clear.

■ FAQs

Why use a fertilizer derived from fish?

Fish is an excellent fertilizer for the soil, a fact that native Americans used to their advantage hundreds of years ago. It's only with the rise of organic farming that the many benefits of using so-called "traditional" agricultural practices, including using fish, have been rediscovered. Fish fertilizers provide an excellent source of fast release organic water-soluble nitrogen, as well as providing a longer lasting food source for certain strains of soil microbes that continue to synthesize nitrogen and other nutrients essential for optimum plant nutrition. Too much nitrogen can be harmful to plants and can increase vulnerability to insects and diseases.

What sets your fertilizer apart from others in the organic industry?

We've created Pacific Natural® using our year-round source of fresh wild ocean fish byproducts and a proprietary enzyme digestion process. This fast process is different from other fish-based fertilizers in that it ensures that all of the fish's fresh ocean nutrients (including the natural oils found in our fish) are retained in the finished product. Pacific Natural's® process methods and fresh high quality ingredients produce a fish fertilizer which promotes quicker growth of soil microorganisms that support a healthy balanced soil and plant vitality.

Are your products certified organic?

Yes. Great Pacific BioProducts holds organic certifications for its Pacific Natural® liquid fish fertilizer with OMRI and WSDA and is used in certified organic crop production. Pacific Natural® has also been approved as an organic fertilizer for Earthbound Farm growers. Our company also utilizes a quality and product safety system founded on the principles of HAACP.

What crop sectors benefit the most by using Pacific Natural® fertilizer?

Because it can be applied as a foliar feed or to seed or soil, Pacific Natural® is an ideal fertilizer for all agriculture and horticulture applications. Our customers range in size from large commercial agri-businesses to independent organic and conventional farmers. Sectors that have shown the best results using Pacific Natural® are Grapes, Berries, Nuts & Fruit Trees, Vegetable Crops, Hops, Forage & Cash Crops, Landscaping, Horticulture and Turf.

What separates our company from others?

Great Pacific BioProducts has many unique characteristics. We are a vertically integrated company, partnering with two large British Columbia fishing and seafood processing companies. They process only wild ocean fish for human consumption. This provides us a consistent year round supply of fresh fish by-products, delivered daily, for the production of Pacific Natural®. We have learned over the last 10 years of experimenting with different formulations of organic materials that our process coupled with our single fresh ocean fish ingredient delivers the best results for our customers. Our dedication to consistent product quality and supply, coupled with our commitment to product safety ensures that Pacific Natural® is the best organic fish-based product available. Customers tell us our product gives them superior performance and that they appreciate our service, support and insight into any questions that they might have.
